Procedure for the Disposal of Pathological (Anatomical Animal) Waste

Pathological Waste includes animal carcasses, animal tissue, fungi, insects, and parasites.

Disposal Procedure

1. Remove all tubing, catheters, plastic clips, tags, etc. from the animal before packaging. ¹.
2. Collect anatomical animal waste in a black polypropylene bag ².
3. Each bag must not weigh more than **10 kg**.
4. Bags **MUST** be tagged with the **RED Biological Waste Disposal Tag** (pictured below) ³.
5. Affix your lab's *Generator Barcode Label* on the tag, where indicated ³.
6. On the tag, CHECK the box marked:
 - "Pathological"** and check the appropriate **"Risk Group"** ⁴.
 - OR
 - "Uncontaminated Pathological Animal"** ⁵.
7. Place sealed bag into a freezer in the LSC Biohazardous Waste Storage Room - Room B2
8. Bagged materials must be stored in a freezer and must be fully frozen prior to pick-up by Environmental Services.

Explanatory Information:

- ¹. If contaminated by Risk Group 2 or Risk Group 3 agents, these solid waste items must be autoclaved and disposed of separately. If uncontaminated, these items may be disposed of in the regular trash.
- ². Black polypropylene bags are to be the extra-heavy gauge anatomical waste bags available through UBC Building Operations Stores, at 822-.4117.
- ³. *Biological Waste Disposal Tags* and *Generator Barcode Labels* can be obtained by calling ESF at (604) 827-5389 or (604) 822-1285.
- ⁴. By indicating **"Pathological - Animal"** and **"Risk Group information"** on the tag, the generator certifies that the animal *wastes only contain the risk agent that is declared on the waste disposal tag*.
- ⁵. By indicating **"Anatomical Animal"** or **"Uncontaminated Pathological Animal"** on the tag, the generator certifies that the related *wastes do not contain Risk Group 2 or Risk Group 3 agents*.

IMPORTANT NOTE:

In consideration of the health and safety of the workers handling laboratory waste, labeling and packaging requirements are strictly enforced.

If the bags are not prepared as specified, Environmental Services Facility (ESF) staff will refuse collection of the waste. In the event that a shipment is not suitable, all attempts will be made to contact the generator from the information provided on the Biological Waste Disposal Tag.
