

Rainin Instrument, LLC is **global leader in the design and manufacturing of premium pipettes and pipette tips**. Since our founding in 1963, we have been advancing pipette and tip technology, and have obtained more than 130 pipette-related patents in the U.S. and abroad.

- In independent tests, Rainin **BioClean® tips consistently rank as being the cleanest** and most pure available. We manufacture our tips under Class 100,000 clean room conditions and guarantee them to be free of DNase, RNase, DNA, pyrogen and adenosine triphosphate (ATP).
- We were the first pipette manufacturer to focus on user safety and repetitive stress injury, and **our pipettes lead the industry in ergonomic design**. Examples: the finger-hook design on all our pipettes allows researchers to completely relax their hand between pipetting cycles. Our patented Magnetic Assist™ technology has enabled us to engineer plungers that are smooth and precise, yet require up to 70% less force. And all of our pipettes are equipped with a silicone shock absorber to reduce thumb impact when ejecting tips.
- Our patented **LTS® LiteTouch™ tip ejection system significantly reduces the risk of injury** while pipetting. With LTS, tip ejection force is just 0.6 kg, making LTS tip easy to remove.
- **Rainin offers a comprehensive range precision calibration and repair/restoration services** from its ISO 9001:2000 certified and ISO 17025 accredited service center in Mississauga, Ontario (2915 Argenta Road, Unit #5, Mississauga, Ontario, L5N 8G6; Tel. 905-817-1052)

RAININ pipettes and tips are used by researchers around the world. Rainin sells its products and services direct to its customers and, as such, they cannot be purchased from catalogs or other third party distributors. Our direct order number is **800-472-4646**, and all products are available for purchase via our web site, **www.rainin.com**.
